

Attempt the following questions:

1. Write a JavaScript program that print numbers from 5 to 1. Output as follows. Use any loop of your choice.

```
5
4
3
2
1
```

2. Write program that print the multiple of 3 from 10 to 30.
`//12,15,18,21,24,27,30`
3. Write a login application that allows the user to enter login detail-3 attempts.
4. Write program that prints numbers from 10 to 0 but skips 7 and 3:
`//10,9,8,6,5,4,2,1,0`
5. Write a program to simulate a simple calculator using the switch statement that performs arithmetic operations like addition, subtraction, multiplication, and division only on integers. This program takes an arithmetic operator +, -, *, / and two operands from the user. Then, it performs the calculation on the two operands depending upon the operator entered by the user.
